The “Cohort” filter permits users to select any FTIC or AA cohort. Multiple cohorts may be selected by holding down the “ctrl” key while clicking on the various boxes. You may clear any of the filters, and start over by clicking on the small red “x” on the top right corner of the slicers.

The “First College” filter is designed to view students’ retention and graduation figures based on their first college of enrollment. “Last College” populates the same data based on students’ last college of enrollment. Users may also utilize both filters to see where students began and where they were enrolled last, and how it affects the retention and graduation of these different groups (i.e. students who began in UGBU and who switched to UGAS).

The “Last Major” section provides the option for users to drill down to retention and graduation figures for a particular program. More specifically, the data populated are based on the major in which students were enrolled since the last dashboard update.

The “Honors College” slicer allows users to select students who were or are currently part of any Honors College cohort.

Any combination of criteria may be used to generate broad or very specific retention and graduation figures.
